DETAILED ACTION

Receipt Acknowledgement

1. Receipt is acknowledged of the Amendment filed on 10th of August 2006. Claims 6, 8, and 14 have been amended; no claim has been canceled; and claim 15 has been newly added since the RCE[2] Non-Final Office Action was mailed on 10th of May 2006. Currently, claims 1, 3, 5, 6, 8, and 10-15 are pending in this Application.

Allowable Subject Matter

2. Claims 1, 3, 5, 6, 8, and 10-15 are allowed.

3. The following is an Examiner's statement of reasons for allowance:

The Applicants' argument in the Response to RCE[2] Non-Final Office Action filed on 10th of August 2006, page 11, line 10 through page 12, line 5, is considered persuasive regard patentability of the invention as disclosed in the claims.

In particular, the feature of the invention for "the cycle signal counts plural times of the leading edge of the clock signal of the primary board prior to toggle of the cycle signal" is not seen to be taught or suggested in the prior art applied in the claims rejection. In updating a search of the prior art, it is noted that the claim limitations are deemed allowable over the prior art of record as the prior art fails to teach or suggest that the cycle signal counts plural times of the leading edge of the clock signal of the primary board prior to toggle of the cycle signal. Therefore, the claims 1, 5, 6, 8, and 10 are forward to distinguish over the prior art of the record, respectively.

The claims 3 and 11-15 are dependent claims of the claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the

issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tomishima et al. [US 6,480,946 B1] disclose memory system for synchronized and high speed data transfer.

Morriss et al. [US 6,463,494 B1] disclose method and system for implementing control signals on a low pin count bus.

Nakano et al. [US 6,397,312 B1] disclose memory subsystem operated in synchronism with a clock.

MacWilliams et al. [US 6,336,159 B1] disclose method and apparatus for transferring data in source-synchronous protocol and transferring signals in common clock protocol in multiple agent processing system.
